Relationship Between Effort-Reward Imbalance, Over-Commitment and Occupational Burnout in the General Population: A Prospective Cohort Study

by Shoman Y, Ranjbar S, Strippoli M-P, von Känel R, Preisig M and Guseva Canu I (2023). *Int. J. Public Health* 68:1606160. doi: 10.3389/ijph.2023.1606160

In the original article, there was an error.

A correction has been made to **Methods**, Measurement of Study Variables, Effort-Reward Imbalance, Over-Commitment, and Burnout, Paragraph 1. This sentence previously stated:

“This questionnaire consists of 23 items split in three subscales: effort (6 items), reward [i.e., esteem (5 items), promotion (1 items), and security (5 items)], and over-commitment (6 items).”

The corrected sentence appears below:

“This questionnaire consists of 23 items split in three subscales: effort (6 items), reward [i.e., esteem (4 items), promotion (5 items), and security (2 items)], and over-commitment (6 items).”

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
